

TOP HAT TATTOO & BODY PIERCING INC. - TATTOO AFTER CARE INSTRUCTIONS

1. After one hour, remove the bandage gently and wash with warm soapy water. Always pat your tattoo dry. **NEVER SCRUB, PICK, SCRATCH OR RE-BANDAGE YOUR TATTOO!!!**
2. Apply a thin layer of Aquaphor 3-5 times a day for the first four days, then switch to a non-scented skin lotion for the next week and a half, or until the skin returns to its pre-tattoo condition.
3. Keep your tattoo out of direct sunlight and tanning booths until your tattoo is healed, at least fourteen days. The old saying goes: "A week to peel, a month to heal."
4. Do not soak your tattoo in a jacuzzi, tub, sauna, or go swimming while your new tattoo is healing. Showers are fine.
5. Do not rub or pick the treated area while it is healing. Loss of color and/or infection could occur.

6. Extreme sun and exposure over the years can and will fade your tattoo. This can be minimized by using strong sunscreen, at least SP 30 or better.
